R. H. Rigdon, M.D.,
Professor of Pathology and Director,
Laboratory of Experimental Research,
University of Texas Medical Branch,
Galveston, Texas

Dear Dr. Rigdon:

One of my duties each year is to prepare an annual report of activities of the research program sponsored by the Tobacco Industry Research Committee.

We are just beginning to reach a point where many of the research projects are capable of being summarized or abstracted with a view to giving some information of progress and of results obtained. I am very anxious to have this list as complete as possible and to be sure that your work is included. The public is really interested in knowing what sort of effort the Tobacco Industry Research Committee is making, and the best way to inform them is through a complete report of the research grant program.

You will find enclosed an attempt on our part to summarize or abstract your work on the basis of publications and/or reports. You may want to replace this abstract copy by one of your own or to modify it in one or more ways. It will be appreciated, however, if in making revisions you will adhere as closely as possible to present form and length. The abstract is being sent to you because we hope that it may save you time and trouble if you find it satisfactory.

At all events, since I am supposed to have this report in shape early in May, I hope that you will return the enclosure with your corrections or approval or send us a different copy of what you would like to say yourself at your earliest convenience and in the enclosed envelope.

With kindest regards.

Sincerely,

CCL:tms
