dr. roger walk
inbifo

dear roger:

re: a nicotine analogs

would you please have someone check the results on the
summary data tables for the following compounds:

1) entry no. 73, cr-1772 and entry no. 79,
cr-2028, ld50 and guinea pig ileum (gpi)--
73 has lower ld50 and higher gpi activity than 79.
is this correct?

2) entry no. 74, cr-1798--this compound has very low
ld50 activity and extremely high gpi activity
(relative to nicotine). are those numbers correct?

also, do you still have samples of the following
compounds available: cr-1461=
cr-1523= and cr-1538. we do not have partition
coefficient data for those 3 compounds. if you have the
compounds perhaps dr. speck could determine the
partition coefficients very soon. if you do not have
samples, i will try to bring them with me when i visit.

re: dna adducts

bruce davies says that the chromatograms you received
were generated by the 2-dimensional method.

re: -/3030

will send information on the samples to mr.
roemer by mail as soon as possible (no later than next
monday).

will call you on monday, 17 october, goo9d

good luck on your examination.

best regards,

bob pages
