Subject: Use of Foote & Jenks Chocolate C-1035

What is this project for? Improving the taste properties of reconstituted sheet with the addition of water soluble flavorants.

How much is used in the sheet?

The amount of chocolate in the sheet is 0.20%.

The amount of chocolate in the total blend (Winston KS, H612) is 0.05%.

The amount of chocolate in one cigarette is 372 micrograms. The 744 micrograms I sent to Deborah Pence was incorrect. I forgot to count the weight of the extract used in the sheet making process.

How is it applied?

The flavorant is applied as a 1% water solution to the base web sheet immediately after the extract is added.
It will be added in the
